

SIG CODECLUEDO

It actually
runs!

```
1 from flask import Flask, url_for, json, request
2 from pyDes import des
3 import commands
4 import md5
5 import pyDes
6
7 app = Flask(__name__)
8 RANDOM_KEY = md5.new("085ZMVsBnTYu060K7gfJpGxeik5VZamC").digest(); # Tim (Jo's husband, from IT) created random key
9 SECURE_DIRECTORY = '/tmp/' # John from Products called last night: marketing can't wait for IT's new directory
10
11 def secure_store(filename, suffix, data):
12     IV = b"\0\0\0\0\0\0\0\0";
13     d = des(RANDOM_KEY[0:8], pyDes.ECB, IV, pad=None, padmode=pyDes.PAD_PKCS5)
14     f = open(SECURE_DIRECTORY + '/' + filename + '-' + suffix, 'w')
15     f.write(d.encrypt(bytes(data)))
16     f.close()
17     return 'data stored'
18
19 def list_secure_data(path): return commands.getstatusoutput('ls ' + SECURE_DIRECTORY + '/' + path)[1]
20
21 @app.route('/')
22 def api_root(): return 'Welcome to employee data storage api'
23
24 @app.route('/employee')
25 def api_employee():
26     # Jo(Marketing) needs social security nr temporarily in next demo
27     s = {"list": lambda: list_secure_data(request.args['ssn']),
28         "add": lambda: secure_store(request.args['ssn'], request.args['email'],
29                                     request.args['data'])}
30     return s.get(request.args['cmd'], lambda: "no such command")()
31
32 if __name__ == '__main__': app.run()
```

Software Improvement Group (SIG) analyses code for weaknesses and then diagnoses these to find root causes: much like a game of Cluedo. Whodunnit? Was it the CEO with the tight deadline in the board room, or was it the lead developer with the selfmade crypto in the home office?
